**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 3 recites the limitation "the magnet" in line 3. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

**5.     *Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Elsaesser et al. (Patent No. US 4,779,165) in view of Setbacken et al. (Patent No. US 6,642,508 B2).***

**Regarding claim 4,** Elsaesser et al. shows in Fig. 8 a sensor shaft (132) defining an axis (110A); a bearing (133) for support of the sensor shaft (132); and a ferrofluid seal (172) to prevent lubricant from migrating from the bearing (133), said ferrofluid seal including ferrofluid liquid aligning in a sealing gap between the sensor shaft (132) and a confronting end of a flux guide element (173, 174) of the ferrofluid seal (Col. 9, line 48 – Col. 10, line 34).

However, Elsaesser et al. does not disclose a coding disk disposed on the sensor shaft at a distance to the bearing.

Setbacken et al. shows in Fig. 1 an optical encoder (29) and a coding disk (30). It would have been obvious to one of ordinary skill in the art to provide an optical encoder and a coding disk of Setbacken et al. disposed on the sensor shaft at a distance to the bearing, instead of magnetic position sensor, on the device of Elsaesser et al. for the purpose of making the device compact.

**Regarding claim 3,** Elsaesser et al. shows in Fig. 8 a sensor flange (183) supported by the sensor shaft (132) via the bearing (133), wherein a magnet (175) is magnetized axially and has opposite end faces, two of said flux guide elements (173,

174) disposed respectively at the end faces for defining two of said sealing gap for ferrofluid liquid (Col. 10, lines 3-22).

**Regarding claim 5**, Elsaesser et al. shows in Fig. 8 that the bearing (133) is constructed to support the sensor shaft (132) without play.

**Regarding claim 6**, Elsaesser et al. shows in Fig. 8 that the ferrofluid seal (172) includes a magnet (175) which is magnetized in axial direction so as to generate a magnetic field which is closed via the sensor shaft (132) to effect the alignment of the ferrofluid liquid, said flux guide element disposed at one end face of the magnet (175) (Col. 10, lines 3-22).

***Response to Arguments***

6. Applicant's arguments with respect to claims 3-6 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
